## PROJECTS

### BootUp (Rails, PostgreSQL, React, Redux)

[Live Site](#) | [Code Repo](#)

*Startup site inspired by Kickstarter.*

- Maximizes code reusability and adaptability by refactoring pages into imported React components
- Ensures data integrity using the Redux model to connect all components to a single frontend data repository and threading data as necessary to child components
- Minimizes database queries by using Rails framework associations to fetch multiple linked resources along with relevant AWS-stored image relations in a single request
- Uses Amazon S3 for offsite resource storage and thus eliminate the need for local image storage

### JavaScript Game (lost of awesome JS libraries)

*Description of most fun game. Much fun. Very awesome.*
