PROJECTS

BootUp (Rails, PostgreSQL, React, Redux)   Live Site | Code Repo
Startup site inspired by Kickstarter.
- Maximizes code reusability and adaptability by refactoring pages into imported React components
- Ensures data integrity using the Redux model to connect all components to a single frontend data repository and threading data as necessary to child components
- Minimizes database queries by using Rails framework associations to fetch multiple linked resources along with relevant AWS-stored image relations in a single request
- Uses Amazon S3 for offsite resource storage and thus eliminate the need for local image storage

JavaScript Game (lost of awesome JS libraries)
Description of most fun game. Much fun. Very awesome.
